

# 陰道鏡檢查

Colposcopy

## 陰道鏡檢查是甚麼？

What is Colposcopy?

陰道內窺鏡是一種用以檢查子宮頸及陰道內部的非入侵性檢查，為子宮頸細胞有異常的女士提供臨床診症、診斷、採集異常樣本等。

陰道鏡檢查程序與子宮頸抹片檢查大致相同，醫生會使用特製的顯微鏡，將子宮頸及陰道表面的影像放大10至40倍，以檢查子宮頸、陰道及陰道口(外陰)。檢查期間醫生於子宮頸塗上藥水，以突顯異常子宮頸組織。如有需要，醫生會抽取一少撮組織樣本作病理分析，再進行止血，全程一般需時約10-15分鐘。

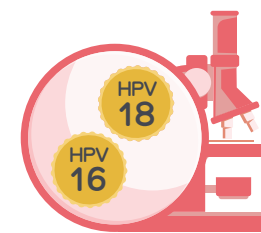

A colposcopy is a non-invasive procedure that examines the cervix and the inside of the vagina. It provides a clinical diagnosis and allows for the collection of tissue samples (biopsies) for further evaluation.

The procedure is similar to a cervical smear; the doctor uses a specialized microscope to magnify the images of the cervix and vaginal surfaces by 10 to 40 times in order to check the cervix, vagina, and vulva. During the examination, the doctor applies a solution to the cervix to highlight any abnormal cervical tissue. If necessary, the doctor may take a small tissue sample for pathological analysis, and end with hemostasis. The entire procedure takes about 10 to 15 minutes.

## 適合對象 Suitable for

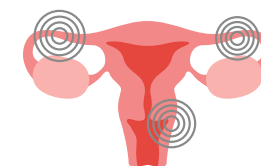

子宮頸抹片有異常  
Individuals with abnormal  
results from a cervical smear

已知有HPV-16或18感染  
Those diagnosed with  
human papillomavirus (HPV)  
types 16 or 18

在兩次經期之間、在性交時  
或之後、在更年期後  
陰道多次出血  
Intermittent vaginal bleeding  
between periods, during or after  
intercourse, or a post-menopause

其他宮頸疾病相關症狀  
Other symptoms related to  
cervical diseases

## 我們的服務

### Colposcopy Service at Chiron Medical

在進行陰道鏡檢查時，與一般婦科檢查姿勢相似，女士需躺在特製的檢查床上。

During a colposcopy, the position is similar to that of a typical gynaecological examination, where the woman lies on a specially designed examination table.

設備先進：符合人體工學的婦科椅設計和內置的陰道鏡頭減低女士檢查時的恐懼和不適。

Advanced Equipment:  
Ergonomically designed gynaecological chairs and built-in endoscopes reduce anxiety and discomfort during the examination.

醫療程序簡單快捷，無需入院，即日可完成檢查。

Simple and Quick Medical Procedure: No hospitalization is required; the examination can be completed on the same day.

高清顯示屏幕幫助發現早期病變細節。

High-Definition Display:  
A high-definition screen helps detect early signs of abnormalities.

## 常見問答 Frequently Asked Questions

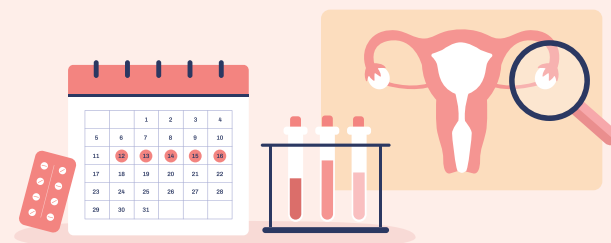

### 檢查前需要做什麼準備？

What preparations are needed before the examination?

應避免在預約時間前24小時灌洗陰道、使用陰道藥物、放入衛生棉條或進行性行為。此外，如發現檢查前一天來經期或得知懷孕，請立即致電診所改期。

You should avoid douching, using vaginal medications, inserting tampons, or having sexual intercourse for 24 hours prior to the appointment. Additionally, if you discover that your period has started the day before the examination or if you find out you are pregnant, please call the clinic immediately to reschedule.

### 檢查完成後該注意什麼？

What should I pay attention to after the examination?

一般而言，在檢查後1-2天，避免劇烈運動或重型活動；檢查後一至二星期內請避免進行性行為、灌洗陰道或將衛生棉條放入陰道，詳情請遵照醫生指示。

Patients are generally advised to avoid vigorous exercise or heavy activities on the day of the examination. Additionally, it is important to refrain from sexual intercourse, douching, or inserting tampons into the vagina for one to two weeks following a cervical biopsy. Please follow your doctor's instructions for specific guidance.

### 檢查時會否引致出血及痛楚？

Will the examination cause bleeding or pain?

檢查期間部分女性可能會感到輕微的不適，但無需全身麻醉。以陰道內窺鏡抽取活組織完成後通常會有輕微出血，醫生一般會為病人塗上藥水止血。有需要時，亦會短暫放置紗布於陰道止血，建議女士於檢查後數天內都使用衛生巾。如有異常大量的陰道出血、發燒、出現盆腔或腹部疼痛的情況，應立即到就近急症室求助。

Some women may experience slight discomfort during the examination, but general anesthesia is not necessary. After a biopsy using the colposcope, there may be light bleeding. The doctor will generally apply a solution to stop the bleeding. If necessary, a gauze may also be briefly placed in the vagina to achieve hemostasis. It is recommended to use sanitary pads for a few days after the examination. If you experience excessive vaginal bleeding, fever, or pelvic or abdominal pain, seek immediate help at the nearest emergency room.

### 檢查會否影響生育？

Will the examination affect fertility?

不會。醫生只會在子宮頸抽取極少量組織作活細胞檢驗，對日後懷孕不會構成任何影響。

No. The doctor only takes a very small tissue sample from the cervix for the biopsy, which will not affect future pregnancies.
